Markie CLI Demo - All Features Showcase

Welcome to Markie! This document demonstrates all the features available in the Markie CLI markdown renderer.

---

1. Basic Markdown

Headers

H1 Header

H2 Header

H3 Header

H4 Header

Text Formatting

This is **bold text**, *italic text*, and ***bold italic***.

Inline `code` and ~~strikethrough~~ text.

> Blockquote with **bold** and *italic*

Lists

Unordered list:

- Item one
- Item two
  - Nested item
- Item three

Ordered list:

1. First item
2. Second item
3. Third item

---

2. GFM (GitHub Flavored Markdown) Features

Task Lists

☑ Completed task
☑ Another done task
☐ Pending task
☐ Another pending task

Autolinks

Visit https://example.com for more info.

Go to http://test.org today.

Footnotes

Here is a footnote reference[1].

[1] This is the footnote definition. It can contain multiple lines and **formatting**.

Definition Lists

Apple
A fruit that is red or green

Banana
A long yellow fruit

Cherry
A small red fruit

Tables

Left Align	Center Align	Right Align
Cell A1	Cell B1	Cell C1
Cell A2	Cell B2	Cell C2

Inline HTML

Inline HTML gets basic styling — colors, superscripts, subscripts, highlights, and underlines:

- Superscript: $E = mc^2$
- Subscript: H_2O
- Colored text: red, green, and rgb blue
- Highlight and underline: marked text and underlined text
- Nested styling: styled superscript

HTML blocks are shown as highlighted code rather than rendered:

```html
<div class="note">
  This raw HTML is displayed as a code block so no content is lost.
</div>
```

---

3. Code Blocks

Rust Code

```rust
fn main() {
    let message = "Hello, World!";
    println!("{}", message);

    let numbers = vec![1, 2, 3, 4, 5];
    for n in numbers.iter() {
        println!("Number: {}", n);
    }
}
```

Python Code

```python
def greet(name: str) -> str:
    """Return a greeting message."""
    return f"Hello, {name}!"

if __name__ == "__main__":
    print(greet("World"))
```

JSON

```json
{
  "name": "Markie",
  "version": "0.4.0",
  "features": ["markdown", "mermaid", "math"]
}
```

---

4. Math Rendering

Inline Math

Inline equation: $E=mc^2$

Inline binomial: $\binom{n}{k}$

Inline square root: $\sqrt{x^2+y^2}$

Display Math

Matrix:

$$\begin{bmatrix} a & b & c \\ d & e & f \\ g & h & i \end{bmatrix}$$

Aligned equations:

$$\begin{aligned} ax+by &= c \\ dx+ey &= f \end{aligned}$$

Cases (simplified):

$$f(x) = \begin{cases} x+1 & x>0 \\ x-1 & x\leq 0 \end{cases}$$

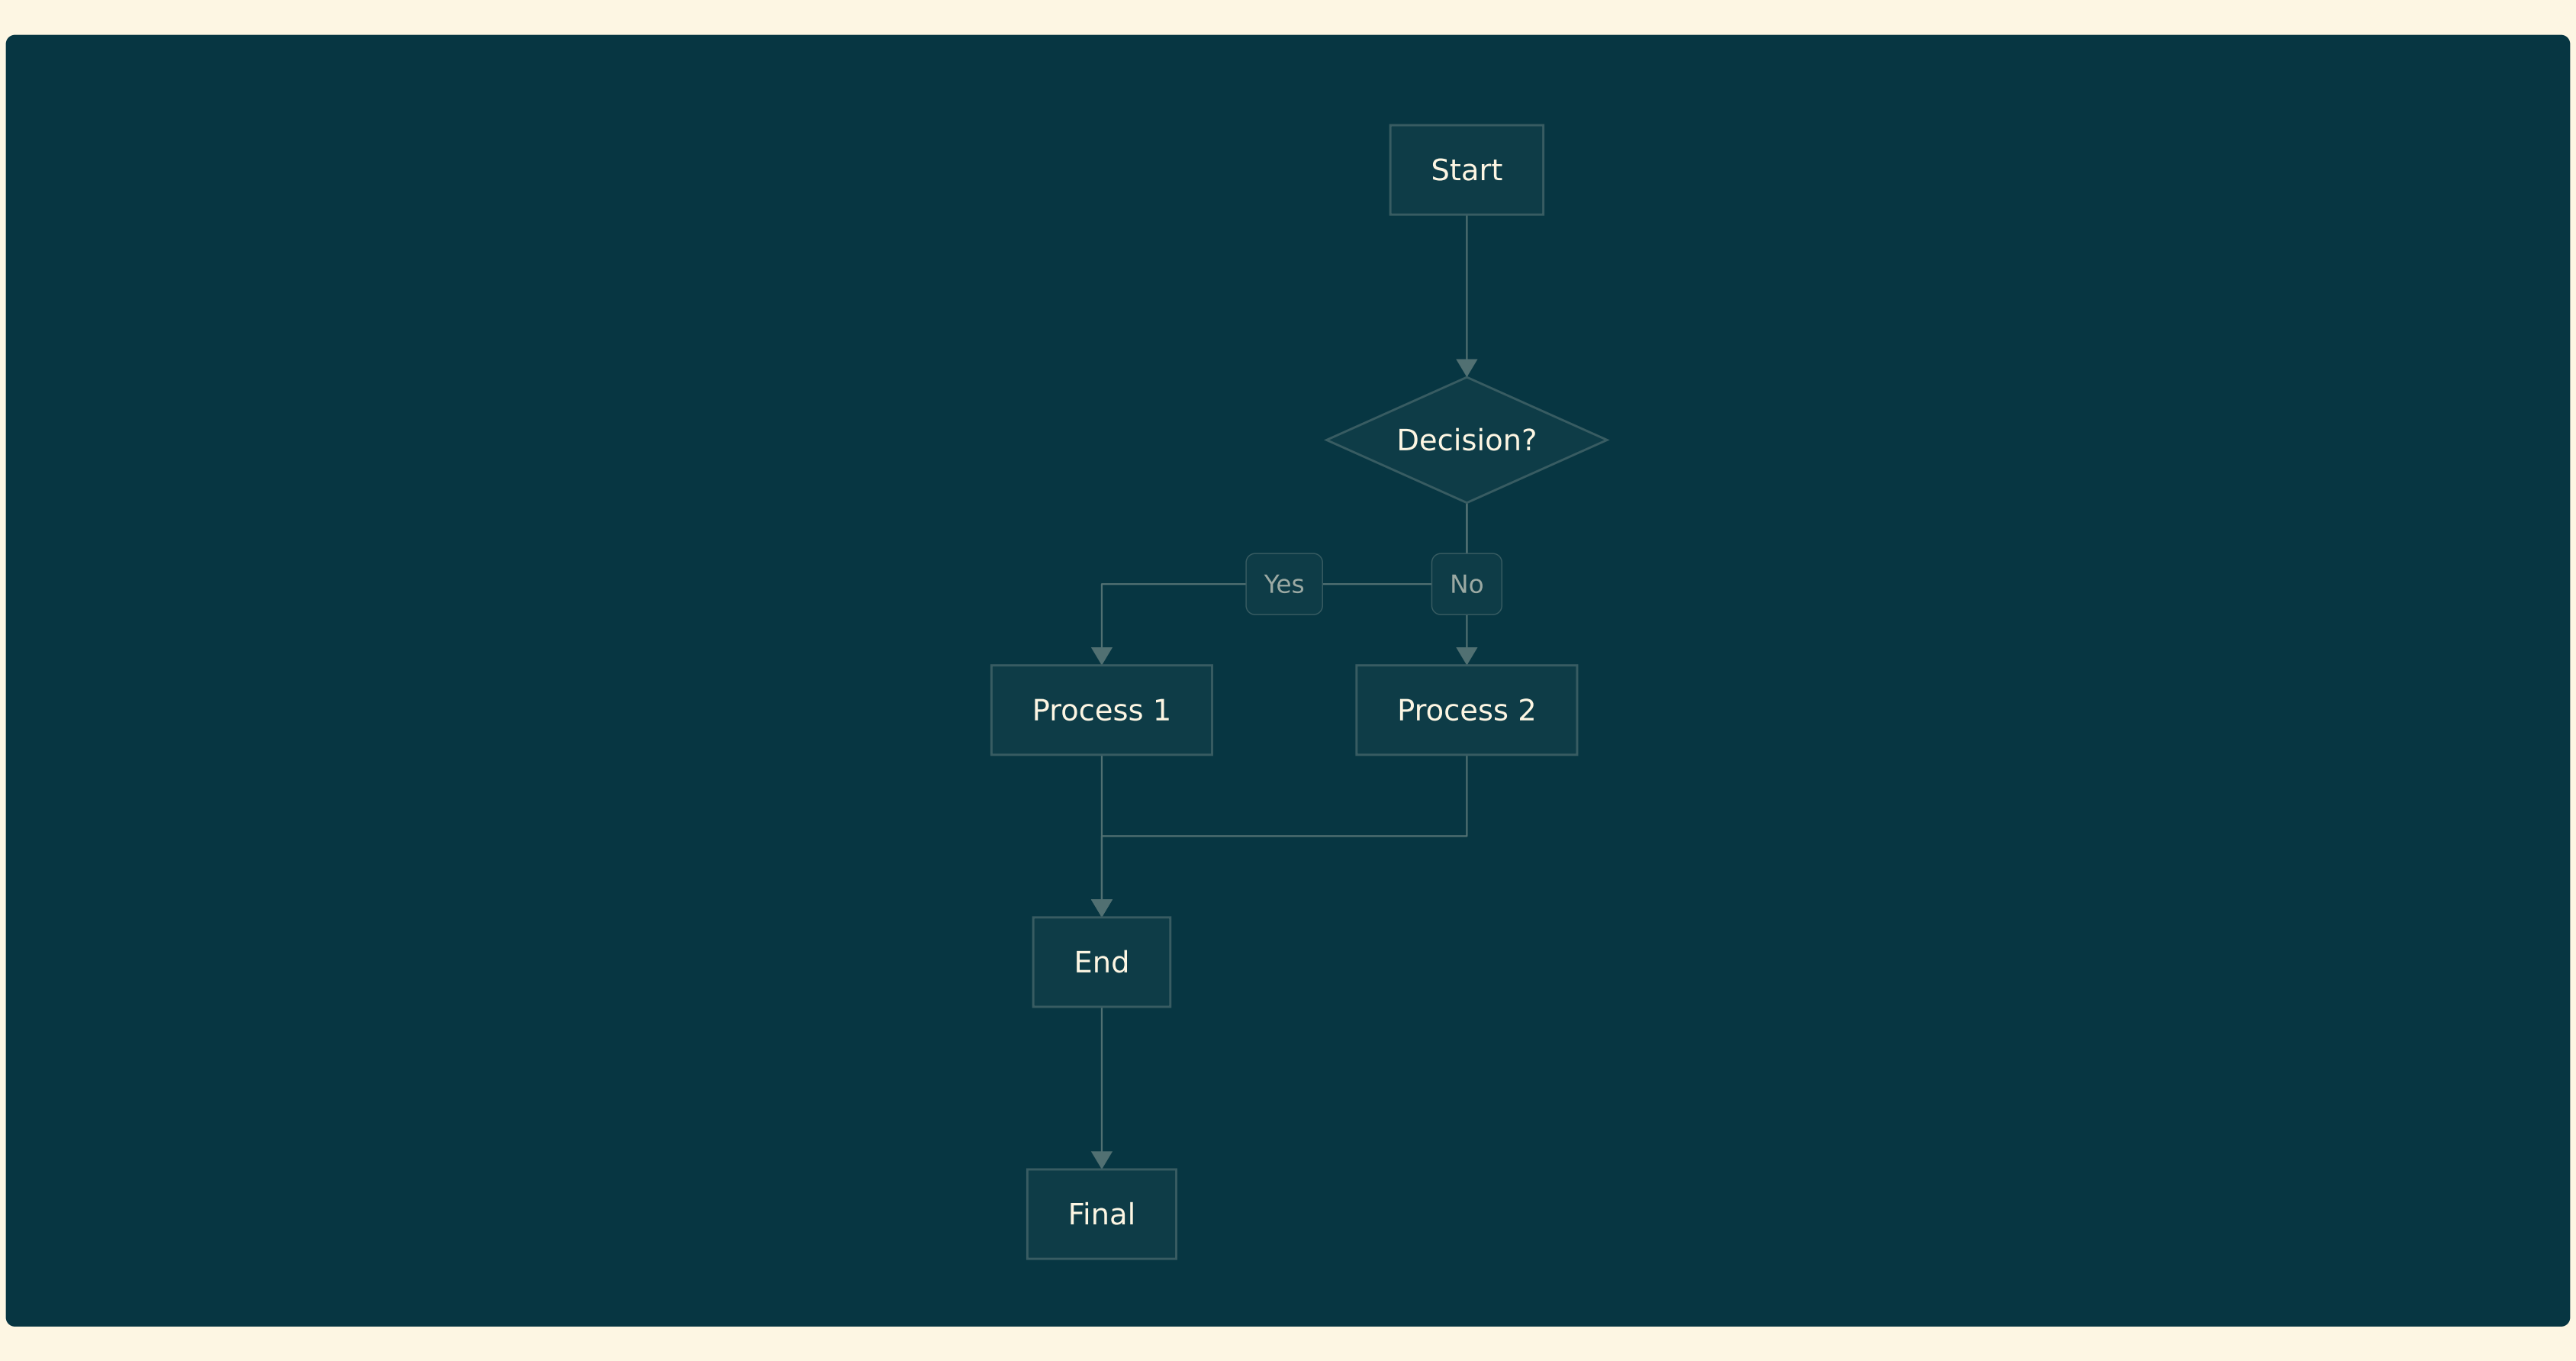
Complex expression:

$$\sqrt[3]{\frac{a^2+b^2}{c^2}} + \sum_{i=1}^{n} i^2$$

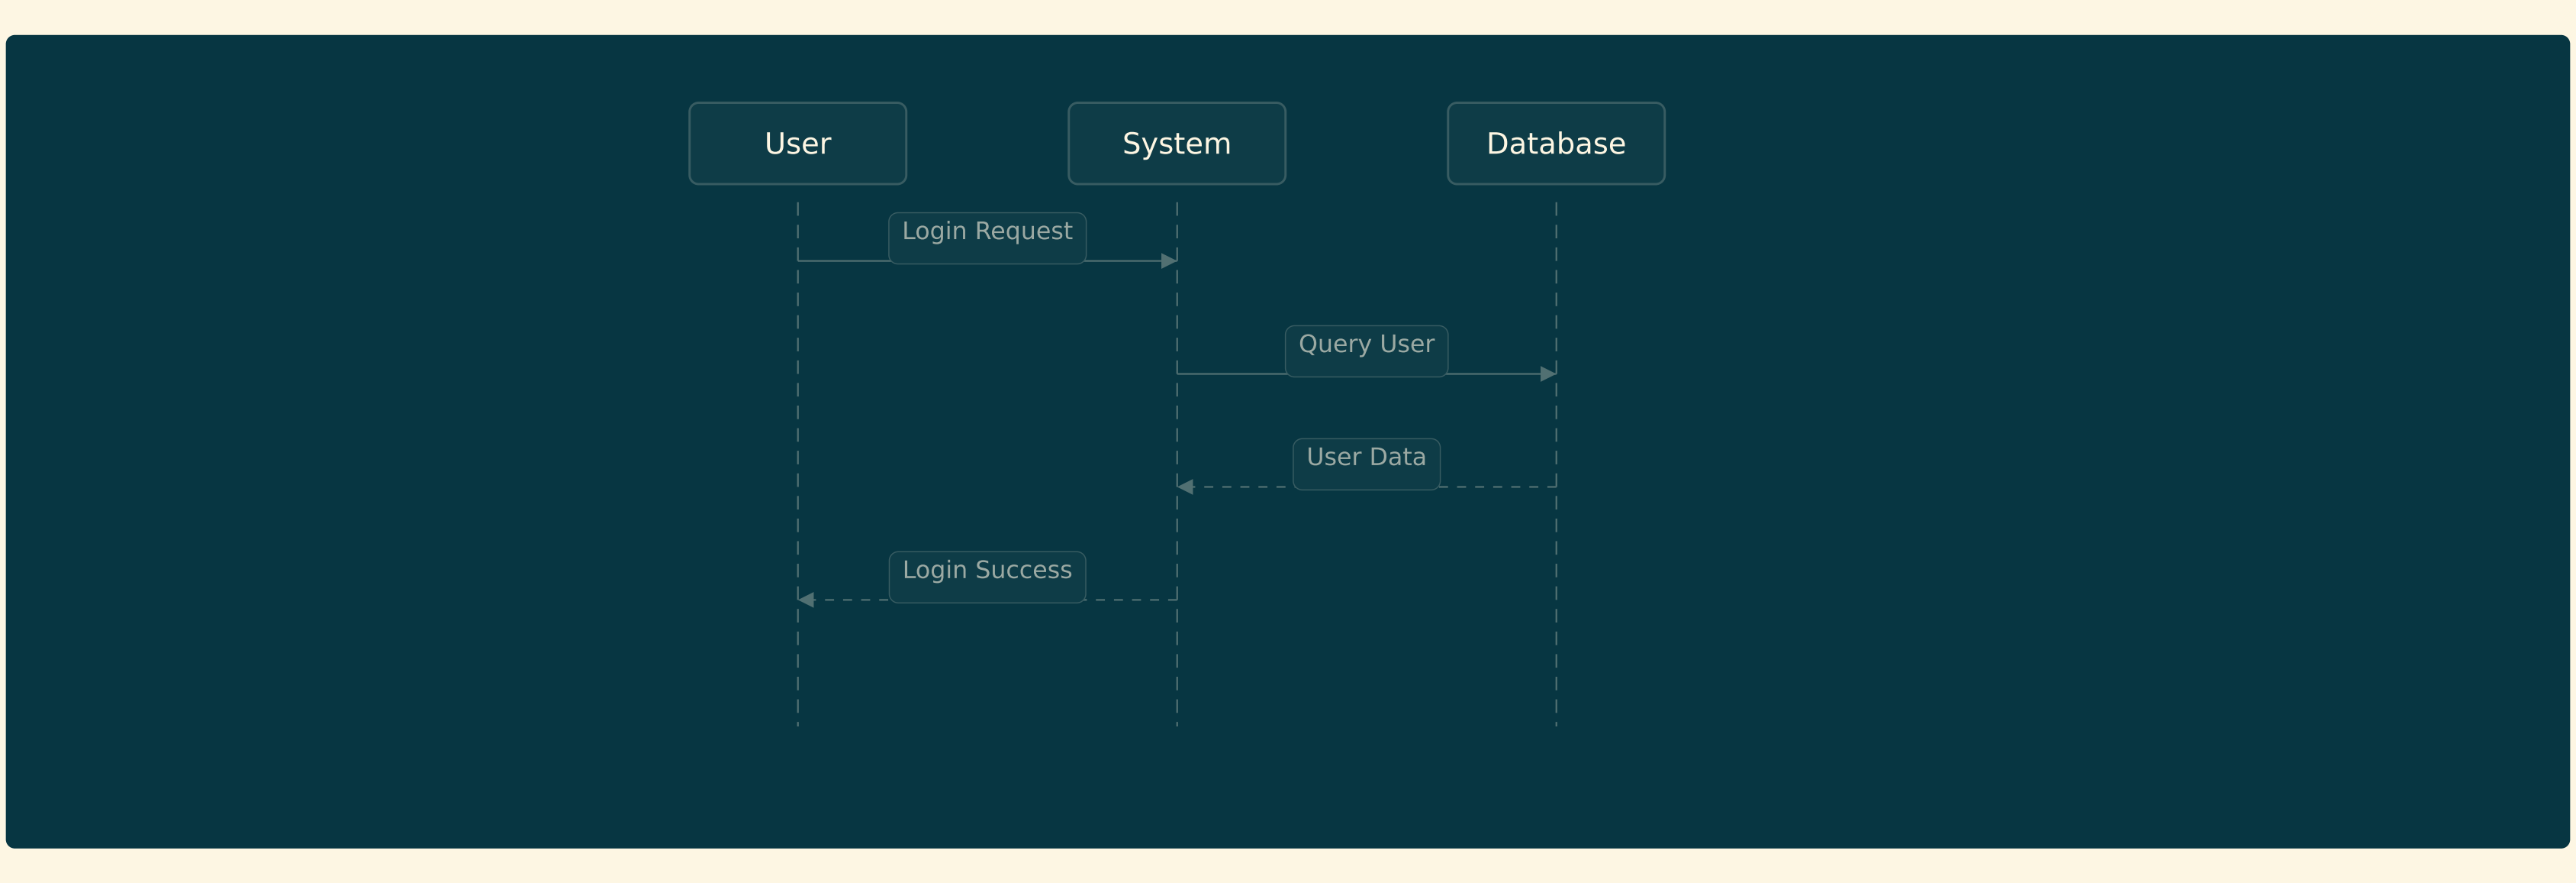
---

5. Mermaid Diagrams

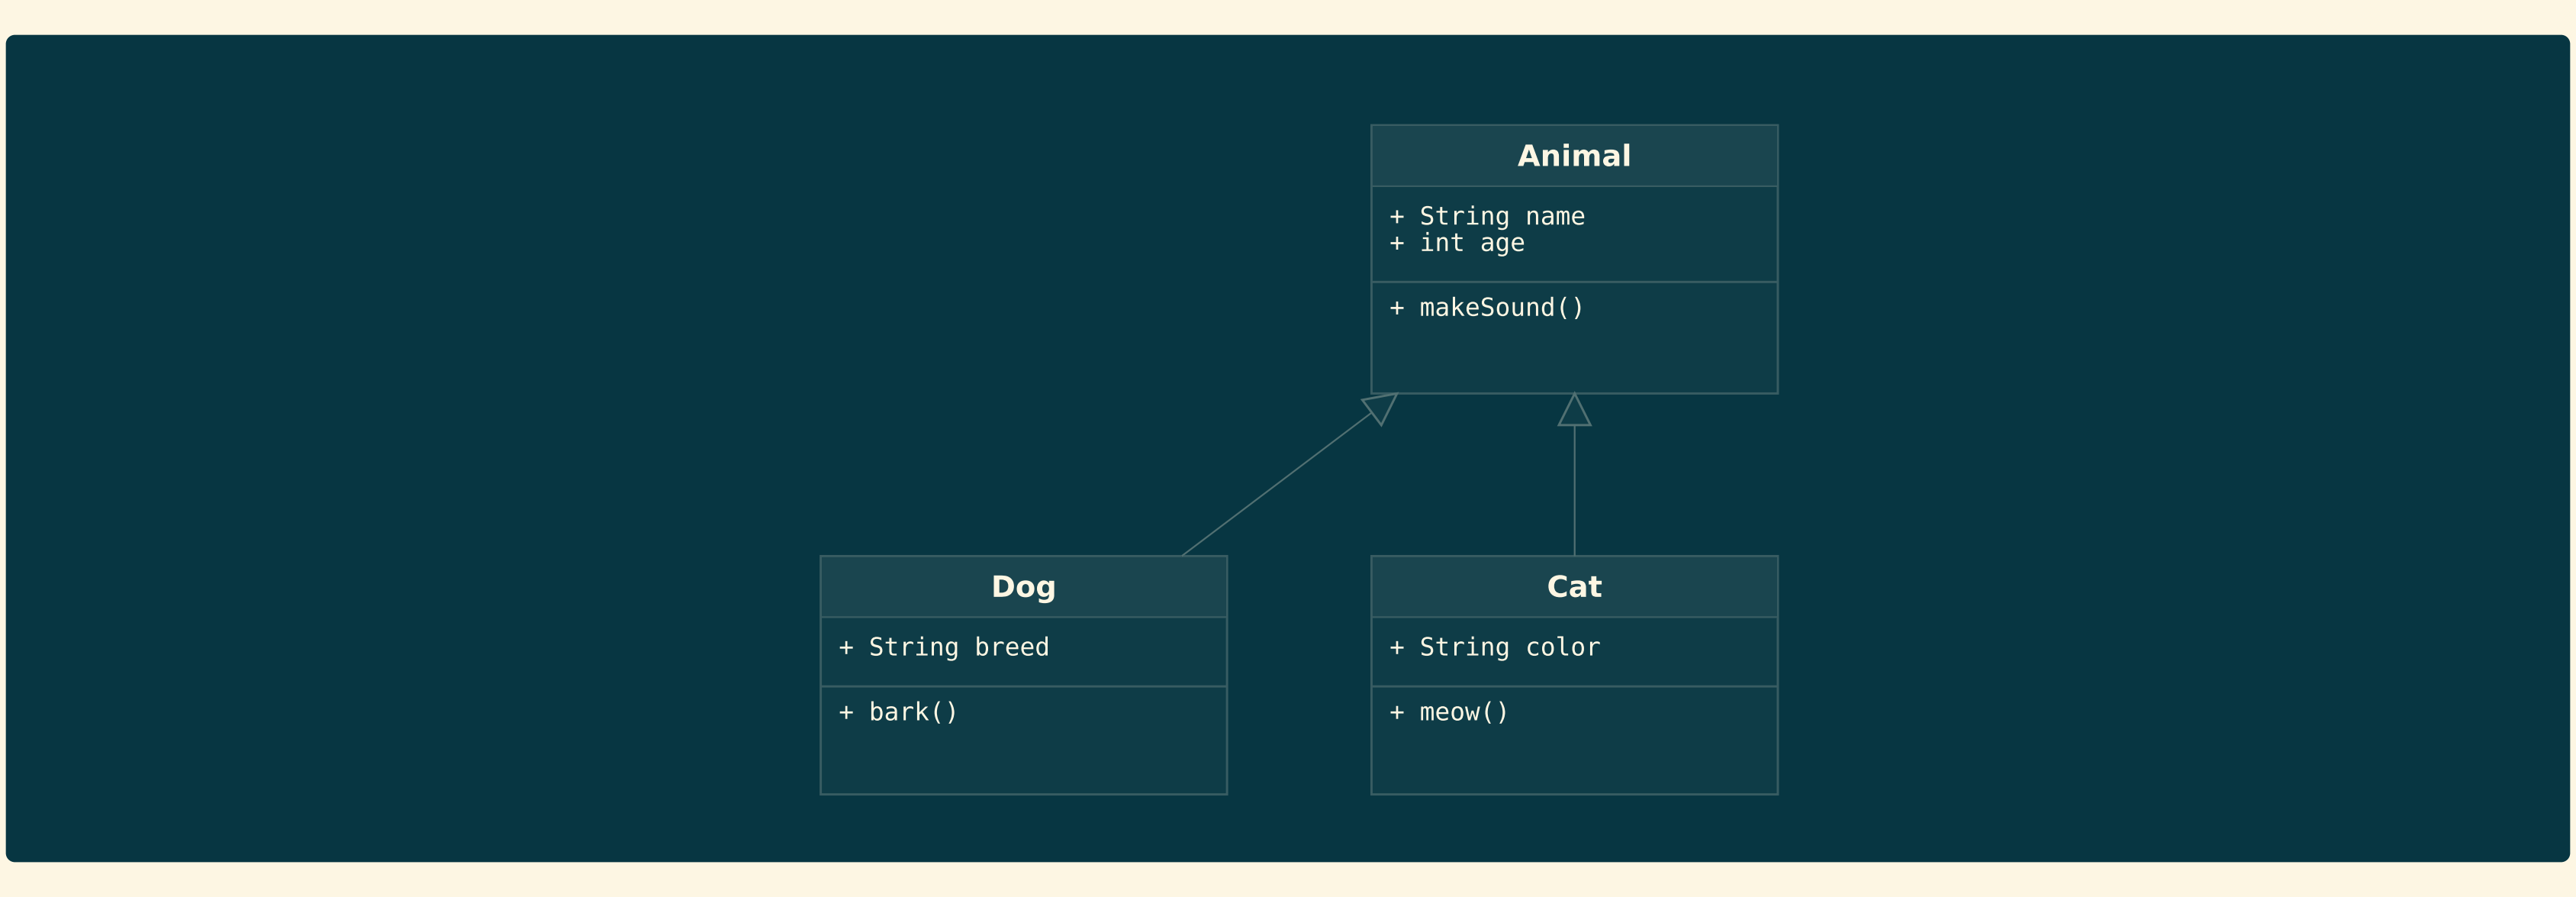
Flowchart



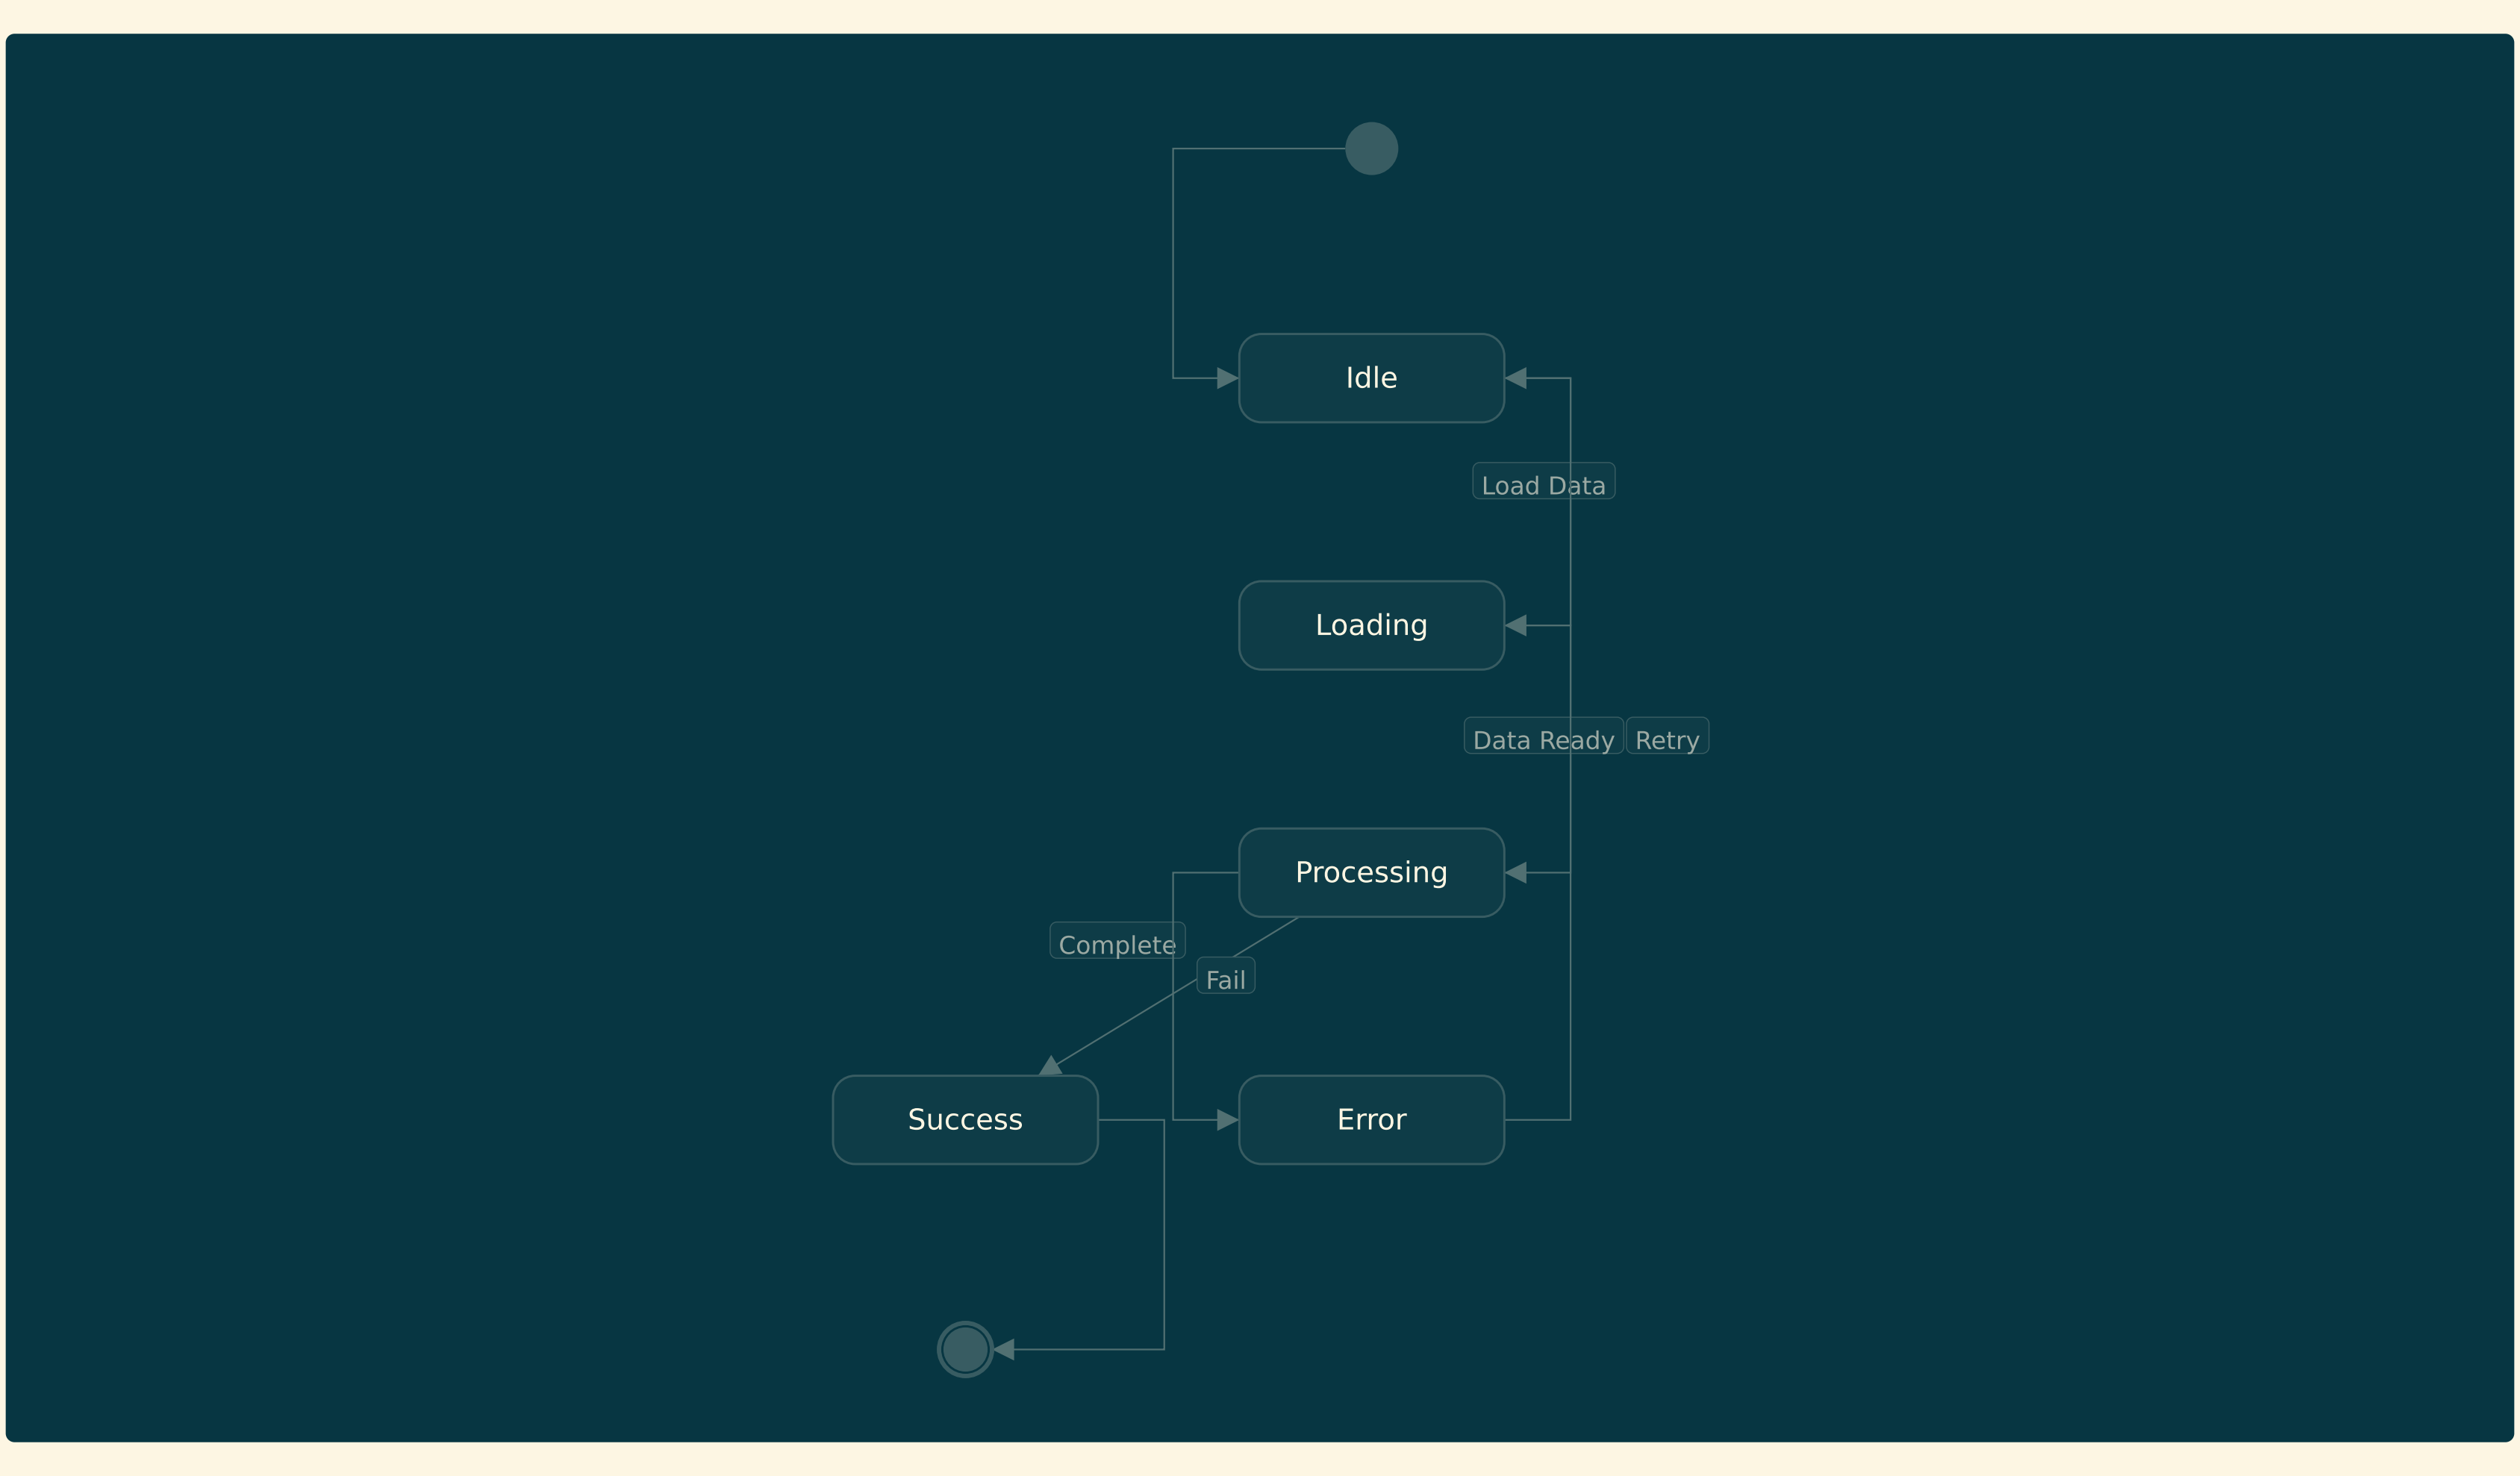
Sequence Diagram



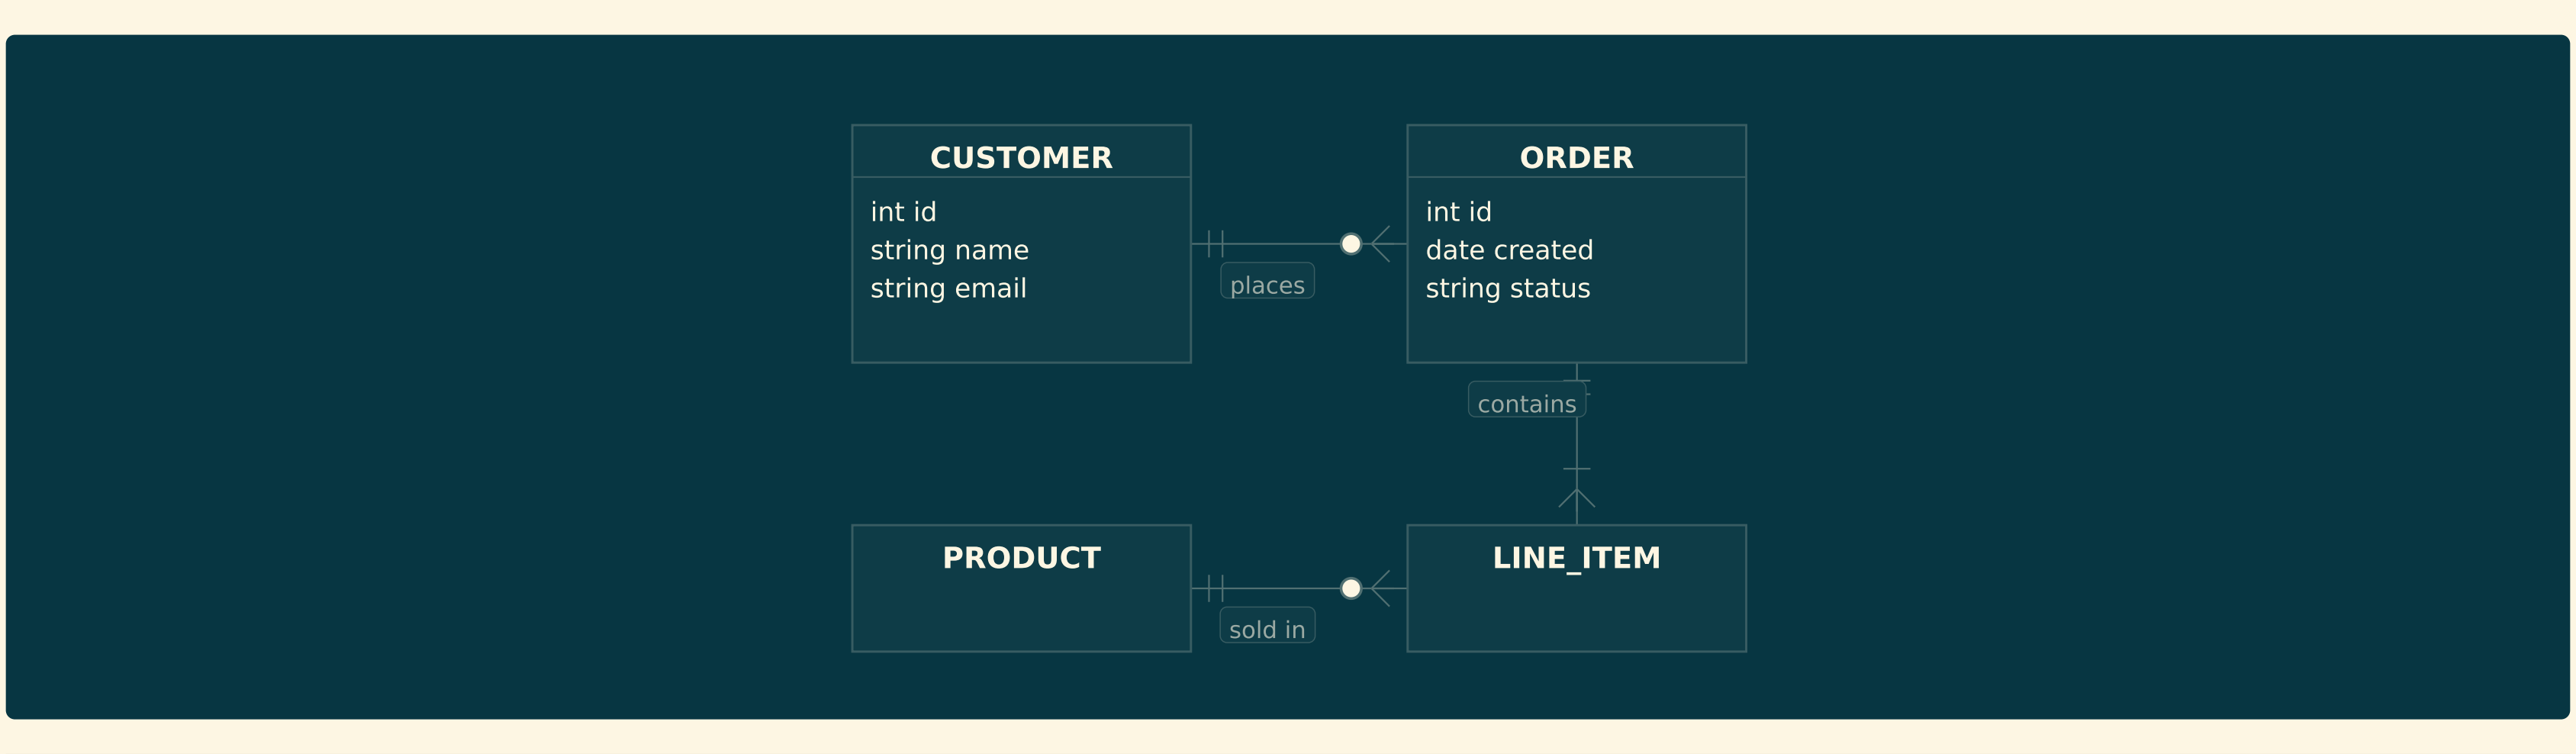
Class Diagram



State Diagram



ER Diagram



---

6. Combined Example

Project Checklist

☑ Set up project structure
☑ Implement markdown parsing
☑ Add Mermaid diagram support
☑ Add math rendering
☐ Write comprehensive tests
☐ Deploy to production

Links and References

- GitHub: http://github.com/example/markie

Summary

This document demonstrates that Markie can render:

1. **Markdown** - Headers, lists, text formatting, code blocks
2. **GFM Features** - Task lists, autolinks, footnotes, definition lists, tables
3. **Math** - Inline and display math with matrices, equations, and more
4. **Mermaid** - Flowcharts, sequence diagrams, class diagrams, state diagrams, ER diagrams

---

7. Theme Examples

Markie supports multiple themes. Use `--theme` or `-t` to select:

Solarized Light (Default)

```
markie demo-all-features.md -o output.svg -t solarized_light
```

Solarized Dark

```
markie demo-all-features.md -o output.svg -t solarized_dark
```

Dracula

```
markie demo-all-features.md -o output.svg -t dracula
```

Nord

```
markie demo-all-features.md -o output.svg -t nord
```

Catppuccin Mocha

```
markie demo-all-features.md -o output.svg -t catppuccin_mocha
```

Available Themes

Run `--list-themes` to see all available themes:

- catppuccin_latte, catppuccin_mocha
- dracula, everforest
- github_dark, github_light
- gruvbox_dark, gruvbox_light
- monokai_pro, nord
- solarized_dark, solarized_light
- tokyo_night

Generated with Markie CLI v0.5.0
